5.5. Roadmap & Future Development

6.6. Team & Community

7.7. Appendix & Glossary

1. Executive Summary

DiceRolls Reborn is a next-generation decentralized ecosystem built on Binance Smart Chain (BSC), designed around asset-backed, utility-focused tokenomics leveraging SmartDeFi 2.0 technology.

At its core, the ecosystem is powered by a synergistic three-token structure — \$DICE, \$MOD, and \$REROLL — each with a distinct utility, interconnected backing mechanics and real-time community integration. This architecture is not only innovative in its economic design but also engineered for transparency, resilience and strategic growth.

DiceRolls Reborn distinguishes itself through:

- **Guaranteed Asset Backing:** Every token is backed by a non-depletable reserve of another crypto asset (e.g., \$WBNB, \$DICE, \$FEG), creating a rising, trust-less baseline value.
- **Utility-Driven Growth:** Tokens fuel gameplay mechanics, staking, community jackpots and cross-project events.
- **SmartDeFi 2.0 Technology:** Enables secure, audited contracts with automated liquidity and asset locking.
- **Cross-Project Collaboration:** With tools like Jackpot BuyBots and X-PlayerOne DApp, DiceRolls promotes DeFi integration rather than isolation.
- **Transparent, Agile Development:** Led by experienced developers who prioritize function, transparency and long-term sustainability.

By fusing DeFi principles with game theory, DiceRolls Reborn empowers investors, users, and partner projects to benefit from a system where volume equals value and where engagement drives compounding ecosystem growth.

2. Introduction & Vision

2.1 Project Overview

DiceRolls Reborn is a multi-token ecosystem built on the Binance Smart Chain (BSC) and powered by SmartDeFi 2.0 technology. The project evolved from a single-token utility concept into a robust, three-token architecture, each token carefully engineered to interact and strengthen the others through a unified economic model.

Unlike typical DeFi projects focused on hype or speculation, DiceRolls Reborn prioritizes long-term sustainability, real utility, value creation through gamified participation, community incentives and decentralized automation.

2.2 Mission and Core Values

Our mission is to build a self-sustaining, transparent and engaging ecosystem, where community interaction directly contributes to real asset value.

We operate on five key values:

- **Utility over Hype:** Products are built to function, not to directly impress with looks.
- **Sustainable Growth:** Every mechanism reinforces a rising asset-backed baseline value.
- **Community Engagement:** Incentivized participation through games, jackpots and staking.
- **Interconnected Innovation:** Tokens and DApps are designed to interact across platforms and partner ecosystems.
- **Transparent Design:** Every mechanism is publicly verifiable and immutable on-chain, while DiceRolls protects its intellectual property by not sharing the smart contract for the X-PlayerOne app, all its functionality is publicly available when using our platform by monitoring via bscscan.

2.3 SmartDeFi Ecosystem Fit

DiceRolls Reborn is not an isolated project—it is a modular contributor to the SmartDeFi 2.0 framework.

Each token is asset-backed and algorithmically linked to another token or asset, creating circular economic pressure and minimizing volatility:

Token	Asset Backing	Purpose
\$DICE	\$WBNB	Core token, ecosystem access
\$MODIFIER	\$DICE	Gameplay enhancement
\$REROLL	\$FEG	Second-chance mechanism

This structure creates compounding benefits across the ecosystem. Volume in one token strengthens the others, reducing systemic risk and aligning incentives between users, investors and partner projects.

3. Tokenomics & Asset Backing

3.1 Three-Token Ecosystem Overview

DiceRolls Reborn introduces a unique, interconnected three-token system. Each token is independently asset-backed, but also economically linked to the others — forming a circular ecosystem of value, utility, and growth pressure.

Token	Max Supply	Asset Backing	Primary Role	Utility Highlights
\$DICE	88,888	\$WBNB	Core Access Token	DVMCE Mandatory for entry, Staking rewards, Jackpot spins Jackpot Buybot, Jackpot rewards X-PlayerOne
\$MODIFIER	999,999,999	\$DICE	Gameplay Enhancer	DVMCE Boosted rolls, Staking rewards, Jackpot spins Jackpot Buybot, Jackpot rewards X-PlayerOne
\$REROLL	999,999,999	\$FEG	Strategic Replayer	DVMCE Re-rolls, second chances, Staking rewards, Jackpot spins Jackpot Buybot, Jackpot rewards X-PlayerOne

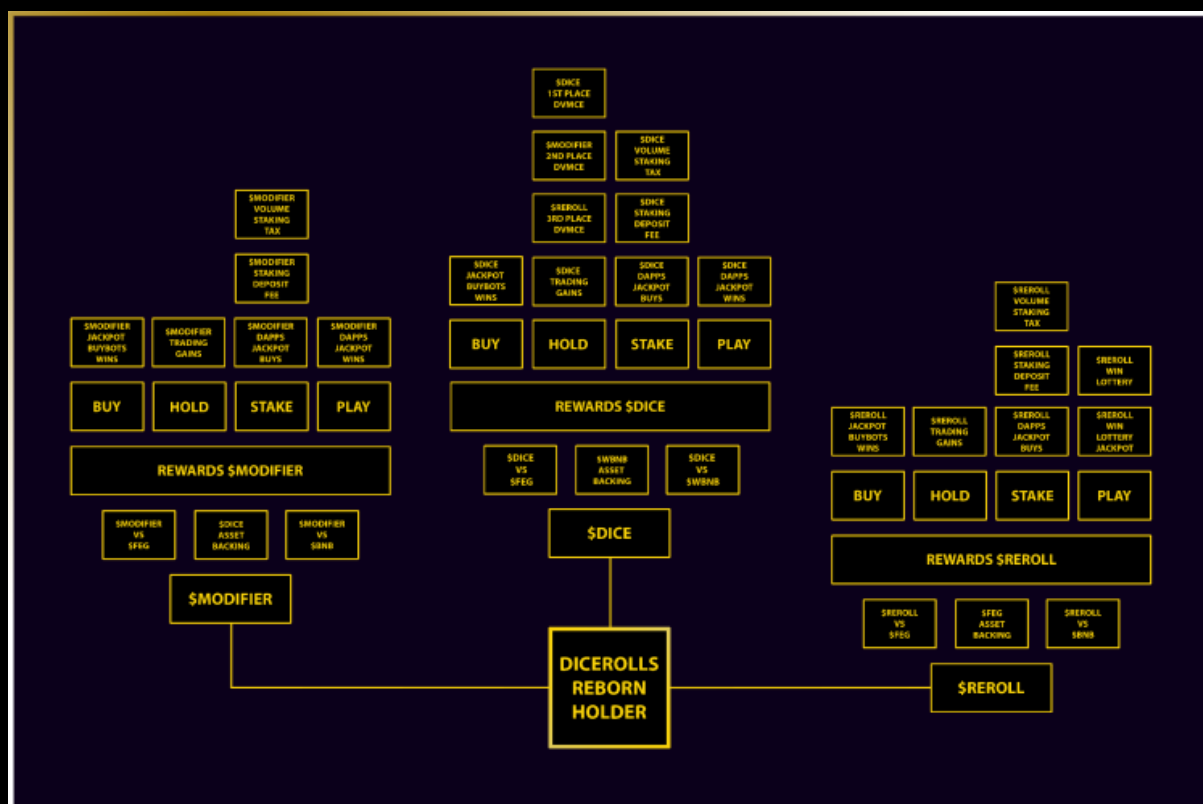

3.2 Token Roles & Synergy

Each token plays a distinct role:

- **\$DICE** – The Core Access Token
 - Functions as the foundation token for the ecosystem
 - Grants entry into Volume Milestone Community Events (DVMCE)
 - When staked receive staking rewards based from trade volume
 - Eligible for jackpots on DiceRolls Jackpot buybot utility
 - Jackpot rewards inside X-PlayerOne class(es)
- **\$MODIFIER** – The Enhancer
 - Designed for users seeking better odds and higher rewards. Used to upgrade roll outcomes during DVMCE

- Asset-backed by \$DICE, it creates continuous buy pressure on the core token
 - When staked receive staking rewards based from trade volume
 - Eligible for jackpots on DiceRolls Jackpot buybot utility
 - Jackpot rewards inside X-PlayerOne class(es)
- **\$REROLL** – The Strategist’s Tool
 - Adds gameplay depth, second chances, and token utility beyond pure speculation. Allows re-rolling during DVMCE
 - Tied to \$FEG governance token, reinforcing the broader SmartDeFi ecosystem
 - When staked receive staking rewards based from trade volume
 - Eligible for jackpots on DiceRolls Jackpot buybot utility
 - Jackpot rewards inside X-PlayerOne class(es)

Together, these tokens create a multi-tier participation model that rewards engagement and strategic decision-making.

**DiceRolls Reborn Rewards Multi-layered Ecosystem V1.0*

3.3 Interconnected Asset Backing

DiceRolls is built on non-depletable asset backing, meaning the value floor of each token can only rise over time.

\$DICE Backing – Backed by \$WBNB

- Every \$DICE transaction collects taxes which are converted to \$WBNB
- The \$WBNB is locked in the \$DICE asset pool, increasing its backing over time
- $\text{Baseline Value} = \$WBNB \text{ in pool} \div \$DICE \text{ circulating supply}$
- This ratio can never decrease

\$MODIFIER Backing – Backed by \$DICE

- \$MOD transaction tax converts into \$DICE, locked in \$MOD's asset pool
- This fuels circular demand and removes \$DICE from trading circulation
- $\text{Baseline Value} = \$DICE \text{ in pool} \div \$MOD \text{ circulating supply}$
- This ratio can never decrease

\$REROLL Backing – Backed by \$FEG (SmartDeFi's Governance Token)

- \$REROLL tax is converted into \$FEG and locked
- Ties \$REROLL's strength to the success of the broader SmartDeFi network
- $\text{Baseline Value} = \$FEG \text{ in pool} \div \$REROLL \text{ circulating supply}$
- This ratio can never decrease

3.4 Supply Strategy & Launch Design

The ecosystem's tokenomics are structured to balance exclusivity with accessibility:

- **Tiered Scarcity:** \$DICE's limited supply of 88,888 tokens establishes it as the premium token, while \$MODIFIER and \$REROLL with 999,999,999 tokens each allow for broader participation
- **Strategic Launch Sequence:** Staged launches allow the ecosystem to develop organically, with each token building upon the foundation of the previous
- **Growth-Oriented Taxation:** Transaction taxes fund staking rewards, liquidity, asset backing, ecosystem development, community givebacks via DiceRolls buybot jackpots, and gamified interactions
- **Team Allocation:** A portion of tokens is reserved for the team, which is staked rather than sold, demonstrating long-term commitment
- **LGE Approach:** Initial funding secured through Liquidity Generation Events rather than traditional pre-sales, providing immediate liquidity

4. Ecosystem Utilities

DiceRolls Reborn's utility layer transforms passive token holding into active participation, offering real, gamified incentives across staking, DiceRolls Buybot jackpots, X-PlayerOne DApps and community milestones.

4.1 Jackpot BuyBots – Real-Time Engagement Engine

Jackpot BuyBots automate engagement across multiple projects and reward user activity with a unique slot-machine experience.

4.1.1 Key Features:

- **No Wallet Access Needed** – Off-chain monitoring ensures maximum security.
- **GeckoTerminal API** – Tracks eligible buys across BSC trading pairs.
- **3-Tier Jackpot System:**
 - **Bronze, Silver, Gold** — different entry thresholds and rewards.
- **Visual Integration** – Telegram slot animation + dashboard updates.
- **Multi-Project Ready** – Any project can request to host jackpots using this tool and use it as giveback to their community.

4.1.2 Operational Flow:

1. User buys an eligible amount → triggers slot animation.
2. A % of tax is added to jackpot pools.
3. Jackpot hit (7,7,7) = prize paid and pinned in group.
4. Jackpots reset and begin accumulating again.

4.1.3 Benefits:

- Boosts buy pressure across projects.
- Generates daily engagement in Telegram.
- Acts as viral marketing without paid ads.
- Partner projects get dashboard exposure.

4.2 DVMCE – Volume Milestone Community Events

The DVMCE is a two-phase community engagement and deflationary system activated by \$DICE volume milestones.

4.2.1 Phase 1: Lucky Draw

- Triggered every \$100K volume (up to \$1M minimum).
- 24h advance notice via Telegram + Twitter.
- Wallet snapshot → tickets sorted by \$DICE tier.
- Winners selected live using on-chain Dice Bot.

4.2.2 Phase 2: Win & Burn

- Winners roll during livestream.
- Winnings go to the user and same amount send to burn wallet.
- Missed claims? DiceRolls team rolls for community.
All tokens contribute:
 - \$DICE – entry
 - \$MODIFIER – upgraded rolls
 - \$REROLL – second chances

Ticket Tier System <i>Holding DICE Tokens</i>				Modifier Tier System <i>Holding MOD Tokens</i>				Reroll Tier System <i>Holding REROLL Tokens</i>			
From	To	Ticket(s)		From	To	Modifier		From	To	Reroll(s)	
10	99.99	∞	1	100,000	999,999	∞	2D7	100,000	999,999	∞	1
100	399.99	∞	2	1,000,000	3,999,999	∞	2D8	1,000,000	3,999,999	∞	2
400	999.99	∞	4	4,000,000	9,999,999	∞	2D10	4,000,000	9,999,999	∞	3
1000	or more		8	10,000,000	or more		2D12	10,000,000	or more		4

4.2.3 Utility Impact:

- Drives trading volume.
- Burns supply.
- Engages users in strategic gameplay.

4.3 Staking Protocol – Rewards with Flexibility

DiceRolls' staking system is fully integrated with the FEG protocol, distributing rewards based on volume—not token inflation.

4.3.1 Structure:

- Deposit Fees:
 - 0.5% → FEG stakers
 - 2% → DiceRolls stakers
- No Withdrawal Fees
- Real-Time Tracking of rewards and balances

4.3.2 Staking Features:

- No lock-up period
- Optional deflationary burn boost
- Multiple token pools supported
- Fully transparent & on-chain

4.3.3 Utility Loops:

- Staking tax → volume → rewards → engagement → value

4.4 DApp Ecosystem – Revenue + Utility Hub

DiceRolls DApps are designed for revenue generation and utility reinforcement across the ecosystem.

4.4.1 X-PlayerOne BNB DApp (Live)

- Non-KYC, on-chain gambling
- Dual Jackpot system powered by game tax
- Integrates up to 2 partner projects per class
- Token locking increases scarcity
- Boosters available; Asset Backing Booster (ABB), Staking Pool Booster (SPB) and Burn Supply Booster (BSB)

4.4.2 Future: PVP Card game DApp

- Designed for Skill based PVP gameplay
- Non-KYC, on-chain gambling
- Dual Jackpot system powered by game tax
- Integrates up to 2 partner projects per game room
- Token locking increases scarcity
- Boosters available; Asset Backing Booster (ABB), Staking Pool Booster (SPB) and Burn Supply Booster (BSB)
- May merge into X-PlayerOne for synergy

4.4.3 DApp Benefits:

- Generates buy pressure + burns
- Brings non-DeFi users into token usage
- Increases ecosystem stickiness
- Modular expansion planned (BASE, other chains)

4.5 Utility Rollout Roadmap

Utility	Status	Notes
Jackpot BuyBots	 Live	Active with partner integrations
DVMCE Events	 Live	Full 3-token mechanics implemented
X-PlayerOne DApp	 Live	BNB-based, active, being visually enhanced
PVP Cardgame DApp	 SOON Planned	Under consideration post DApp upgrade

5. Roadmap & Future Development

DiceRolls Reborn is built for long-term sustainability. Our roadmap is structured across clear phases: completed milestones, short-term rollouts, mid-term scaling, and a bold long-term vision.

5.1 Completed Milestones

These achievements form the operational foundation of the DiceRolls ecosystem:

✅ Token Launches

- \$DICE – Core token (exclusive 88,888 supply) launched with \$WBNB backing
- \$MODIFIER – Gameplay booster backed by \$DICE
- \$REROLL – Re-roll token backed by \$FEG governance token

✅ Ecosystem Launches

- Jackpot BuyBots live across multiple Telegram groups
- DVMCE events fully functional with tiered rewards and deflation
- Staking protocol integrated with FEG, supporting 3-token rewards
- X-PlayerOne BNB DApp deployed — NON-KYC, dual jackpot, partner-integrated

5.2 Short-Term Focus

We're finalizing core features and expanding reach.

5.2.1 Immediate Priorities

- Upgrade X-PlayerOne visuals, feedback loops, and booster logic
- Expand partner integrations into BuyBots and DApp classes

5.2.2 Ecosystem Improvements

- UI/UX refinement across all platforms
- Improved Jackpot Dashboard with analytics and project stats
- More educational content: videos, docs, onboarding packs

5.3 Medium-Term Vision

As the core stabilizes, we expand the utility and build scale.

5.3.1 Planned Expansions

- PVP Cardgame DApp (Standalone or X-PlayerOne merge)
- Advanced analytics dashboards for investors and stakers
- New utilities added to \$DICE, \$MODIFIER and \$REROLL tokens

5.3.2 Growth Tactics

- Targeted partnerships with BSC/DeFi projects
- Organic exposure via gamification, not influencers
- Broader community initiatives and incentive programs

5.4 Vision BASE Chain Expansion

We aim to become multi-chain — starting with BASE.

5.4.1 BASE Roadmap

- Bridge \$DICE, \$MODIFIER, \$REROLL to BASE
- Port BuyBots + DApp with BASE-compatible UI
- Onboard BASE-native projects into the jackpot ecosystem

5.4.2 Strategic Value:

- Tap into newer, gas-efficient DeFi communities
- Show cross-chain versatility and strengthen DiceRolls branding
- Increase exposure through BASE-native partnerships

5.5 Long-Term Vision (2026+)

DiceRolls Reborn isn't just a project — it's a growing protocol designed to adapt, integrate, and endure.

5.5.1 Ecosystem Evolution

- Optional community governance model to shape upgrades
- Potential introduction of new ecosystem tokens or layers
- Cross-project utility marketplaces

5.5.2 Technological Innovation

- Layer 2 or rollup integration for scalability
- Multi-chain utility tracking
- Exploration of AI tools for user support or gameplay mechanics
- Privacy layers for gambling, wallets, or token movement

5.5.3 Self-Sustaining Growth

- Revenue from DApps > token emission = healthy economics
- Fully gamified and decentralized utility loop
- Brand expansion into DeFi gaming, collectibles, and NFT rewards

6. Team & Community

DiceRolls Reborn thrives on a developer-led foundation and a highly engaged, mission-driven community. While the ecosystem is powered by advanced technology and strategic design, its true strength lies in the human element: builders, contributors, and believers aka ambassadors working together.

6.1 Development Team

The core developer brings over 12 years of experience across:

- Full-stack software & hardware development
- Blockchain architecture & data analysis
- QA, systems integration, and project management
- Game design and community mechanics

6.1.1 Academic Background:

- Degree in Application Development
- Graduate in Business Engineering & Computer Science
- Minor in Game Design

6.1.2 Development Philosophy:

- Function before aesthetics – What works, wins.
- Transparent by design – Trust-less, auditable smart contracts.
- Agile execution – Iterative builds aligned with user feedback.
- Game-layer logic – Mechanics that engage, reward, and scale.

Most contributors work on a voluntary or part-time basis, united by long-term belief in the project and shared upside from ecosystem success. No centralized salaries, no VC pressure — just builders aligned with product value.

6.2 Community Engagement

Community is not an audience — it's a partner in value creation.

6.2.1 Active Initiatives:

- DVMCE Events: Gamified events rewarding \$DICE holders and burning supply.
- Telegram Jackpot Bots: Real-time slot machine + jackpot activity across integrated projects.
- Live Dice Rolls: Verified randomness via Telegram Dice Bot during events.
- X-PlayerOne Jackpots as our 3 tokens are connected in multiple classes and will be expanding to more classes during each new or expanding partnership(s).
- Staking Incentives: Transparent, flexible staking without lock-ins or hidden terms.

6.2.2 Channels:

- Telegram – Core hub for updates, events and support
- Twitter/X – Milestone alerts, community snapshots, Tracking channels for Jackpot Buybots & X-PlayerOne
- Dashboard – Real-time jackpot buybot stats & X-PlayerOne DApp stats (in progress)

6.3 Strategic Partnerships

DiceRolls doesn't exist in a vacuum — it's built for collaboration-first DeFi.

6.3.1 Active Integrations:

- X-PlayerOne DApp: NON-KYC gambling platform with integrated jackpots and dual-class mechanics. Hosts both DiceRolls and partner tokens.
- Jackpot BuyBots: Public utility shared with external DeFi projects. Expands the visibility and usage of partner tokens via shared rewards.
- FEG Ecosystem: Deep integration with FEG staking mechanics and backing logic. \$REROLL contributes semi-locked \$FEG to long-term treasury pressure.

6.3.2 Partnership Benefits:

- Cross-community marketing (Telegram, DApp, jackpots)
- Buy pressure and burn effects for all parties involved
- Access to a broader SmartDeFi network

6.4 Community-Centric Governance

While core systems are designed for secure operation, DiceRolls maintains an open-loop feedback model:

- Regular feedback channels for all holders
- Transparent communication of updates and roadmaps
- Integration of community ideas into DApp and future utilities
- Future plans to introduce voting mechanisms for key upgrades

This approach ensures DiceRolls Reborn evolves *with* its user base — not apart from it.

7. Appendix & Glossary

This section explains key terms and acronyms used throughout the DiceRolls Reborn Gold Paper.

- **FEG:** Governance token and ecosystem powering the SmartDeFi infrastructure.
- **SmartDeFi:** A decentralized token architecture enabling guaranteed asset backing and self-contained liquidity.
- **\$DICE:** The core token of the ecosystem, backed by \$WBNB. Required for events, jackpots, and staking.
- **\$MODIFIER:** The enhancer token used for upgraded rolls. Backed by \$DICE.
- **\$REROLL:** The re-player token for second chances. Backed by \$FEG.
- **Asset Backing:** The reserve value (in crypto) locked behind each token, forming its non-depletable baseline.
- **Liquidity Generation Event (LGE):** A fair launch funding method that provides liquidity without pre-sales or VC deals.
- **Baseline Value:** The lowest guaranteed value of a token, based on the total asset backing pool divided by circulating supply.
- **Staking:** A protocol where users lock tokens to earn rewards, without inflation or hidden mechanics.
- **Smart Lending:** An advanced feature that removes tokens against their backing without hurting the baseline value.
- **Backed Token:** A token that has locked reserves of another asset, creating a rising floor value.
- **DVMCE:** DiceRolls Volume Milestone Community Events – community lotteries triggered by volume thresholds.
- **Jackpot BuyBot:** An off-chain utility tracking buys and triggering jackpot spins with Telegram integration.
- **X-PlayerOne:** NON-KYC gambling DApp with integrated dual jackpots and partner token slots.
